DETAILED ACTION

1. Claims 1-28 are presented for examination.

Information Disclosure Statement

2. This office acknowledges receipt of the following items from the Applicant:
Information Disclosure Statement (IDS) filed on July 01, 2003.
3. Information disclosed and list on PTO 1449 was considered.

Priority

4. Receipt is acknowledged of papers submitted under 35 U.S.C. 119(a)-(d), which papers have been placed of record in the file.

Drawings

5. Figures 1-3 should be designated by a legend such as --Prior Art-- because only that which is old is illustrated. See MPEP § 608.02(g). Corrected drawings in compliance with 37 CFR 1.121(d) are required in reply to the Office action to avoid abandonment of the application. The replacement sheet(s) should be labeled "Replacement Sheet" in the page header (as per 37 CFR 1.121(d)) so as not to obstruct any portion of the drawing figures. If the changes are not accepted by the examiner, the applicant will be notified and informed of any required corrective action in the next Office action. The objection to the drawings will not be held in abeyance.
6. Applicant is advised to employ the services of a competent patent draftsman outside the Office, as the U.S. Patent and Trademark Office no longer prepares new

drawings. **The corrected drawings are required in reply to the Office action to avoid abandonment of the application. The requirement for corrected drawings will not be held in abeyance.**

Reasons for Allowance

7. Claims 1-28 are allowed.

The following is an examiner's statement of reasons for allowance:

Claims 1-28 include allowable subject matter since the prior art made of record and considered pertinent to the applicant's disclosure does not teach or suggest the claimed limitations. Lancaster, Loren T. (U.S. Patent No. 6,137,720), Tanaka et al. (U.S. Patent No. 5,872,734), and others, does not teach the claimed invention having a non-volatile semiconductor storage device comprising in deletion verification which verifies that the contents stored in the plurality of memory cell transistors have been deleted, a read is executed on each of the plurality of word lines, and in the read, the word line circuit provides the selected one of the plurality of word lines with a determination potential used to determined whether or not the contents have been deleted, while providing the other non-selected word lines with a read potential higher than the determination potential.
